wiTECH Bandwidth Requirements

DESCRIPTION:

- Reliable Internet connection speed and consistency are essential for the wiTECH System.
- **wiTECH requires <u>3 Mbps download</u> and <u>3 Mbps upload</u> bandwidth per wiTECH user**. (1.5 Mbps for the VCI device + 1.5 Mbps for the viewing device (tablet, phone, PC) = 3 Mbps download and upload bandwidth per user)
    - Each additional wiTECH user should have **3 Mbps of additional available bandwidth**. Of course, higher bandwidth brings increased wiTECH performance.
    - If your service location has 10 technicians that utilize wiTECH simultaneously, wiTECH requires <u>30 Mbps download</u> and <u>30 Mbps upload</u> bandwidth (3 Mbps X 10 technicians = 30 Mbps).

ABOUT CONNECTION SPEED

- Most Internet Service Providers (ISPs) advertise their Internet connection speeds in M<u>b</u>ps or M<u>b</u>/s (<u>Megabits </u>per second).
- However, when testing your Internet connection, sometimes the results are displayed as M<u>B</u>/s (note the capital B) which means <u>Megabytes per second</u>.
- *There is a big difference between the lowercase **b** and the uppercase **B**.* If the results are displayed as MB/s then the number has to be multiplied by 8 in order to obtain the speed results in Mbps:

For example, if the speed test resulted in a speed of 1.5M<u>B</u>/s (note the capital B), then we would calculate Megabits as follows:

1.5 x 8 = 12

By this calculation, the Internet connection speed is 12M<u>b</u>ps (12 Megabits per second).

TESTING YOUR CONNECTION SPEED

- Two popular speed test websites are www.speakeasy.net/speedtest and www.speedtest.net.
    - Both websites already display the results in <u>Mbps </u>(Megabits per second).
- As resources on the network are used, bandwidth availability can be reduced, so remember the 3 Mbps requirement is for wiTECH and does not include additional bandwidth requirements from the service desk, parts, sales, etc.
